

MINE · MERGE · MAP / DATA

Maltego is an open source intelligence tool which uses link analysis to build a comprehensive visual overview of your data points. You can easily pull data from dispersed sources and automatically map the data relationship into a visual graph. Using various visualization layouts, you can intuitively spot patterns and connections that go otherwise unnoticed.

EXAMPLE INVESTIGATION

Maltego can be used to fingerprint an entire network infrastructure starting from a single domain name. In this graph, @KodyKinzie shows us how to discover DNS servers used by a target organization.

How Investigators Use Maltego

CYBER THREAT INTELLIGENCE

Map comprehensive threat landscapes, threat actor profiles, TTPs, and other intelligence to support various security operations.

FRAUD & ABUSE PREVENTION

Import, connect and visualize internal logs, repositories, spreadsheets, and other databases to fight numerous types of insider threats, corporate fraud or embezzlement, and product or platform abuse.

CRIMINAL INVESTIGATIONS

Names, aliases, email addresses, social media accounts, images—Build a comprehensive identity profile or criminal activity history that is otherwise difficult to obtain.

SOCIAL MEDIA & DARK WEB

Build a comprehensive digital profile of criminals and monitor chatter on deep & dark web sites, forums, channels, and groups without any risk of exposure or technical prerequisite.

Download Maltego for free or schedule a personalized demo on maltego.com now.
