

MALTEGO MACHINES PART 1

What Are Machines & How Can They Automate Investigations?

WHAT ARE MACHINES?

Machines are macros in the Maltego Desktop Client that run multiple Transforms on a data set automatically.

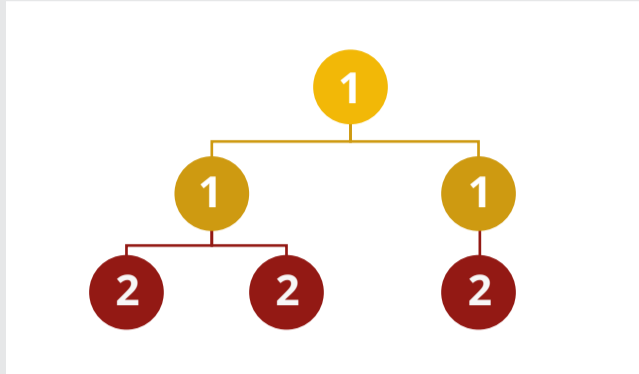

MACHINES CAN RUN TRANSFORMS IN 3 WAYS:

Parallely

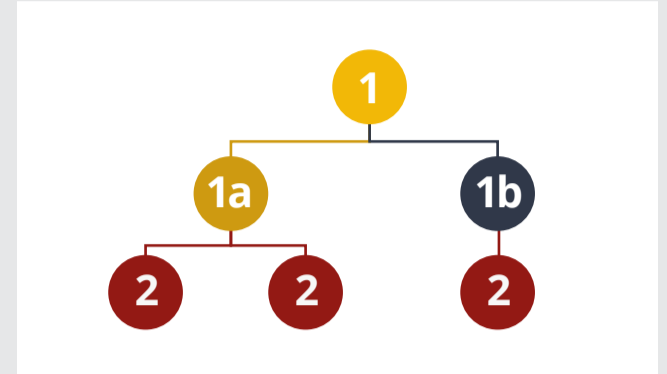

Running multiple Transforms on the same Entity at the same time

Sequentially

Running Transforms in a sequence on returned Entities of the previous Transforms

Both

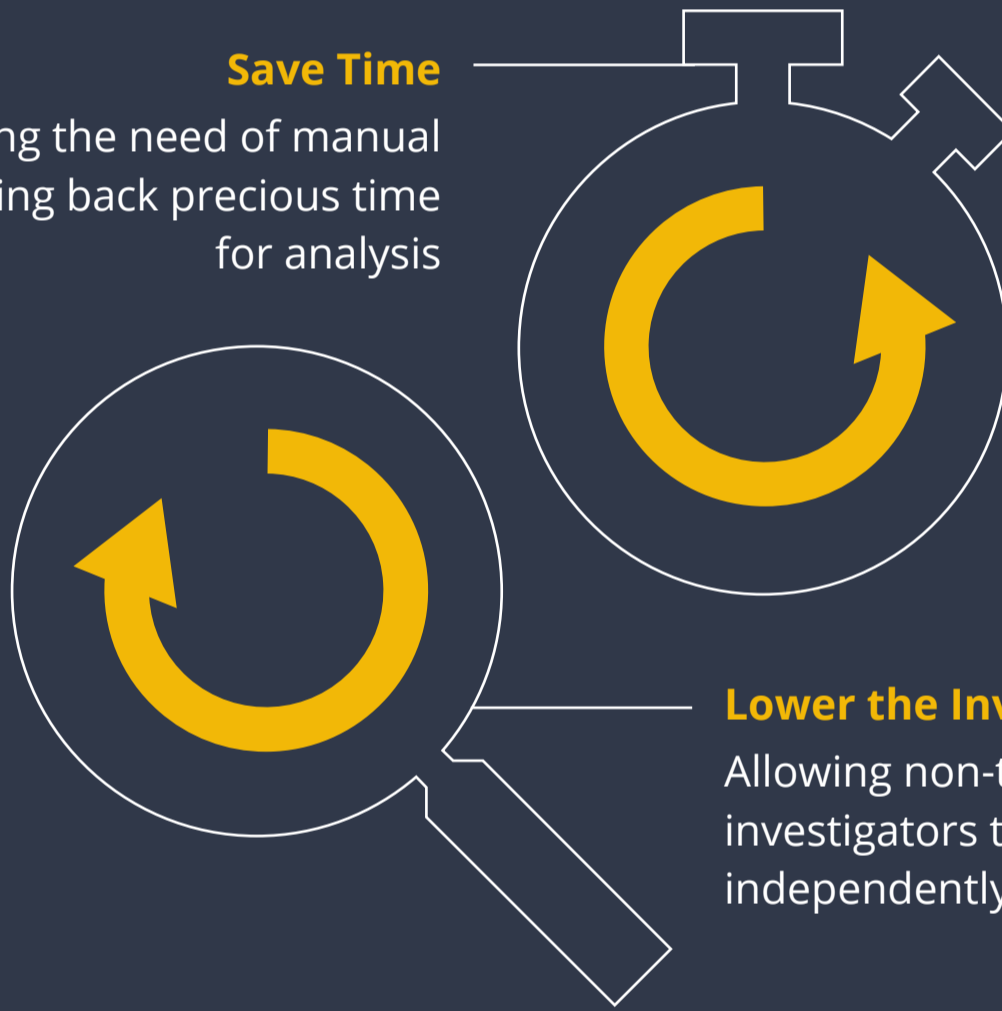

Running Transforms both in parallel and subsequently on specified Entities

Note: Nodes with the same color are results of the same Transform. The number indicates the order in the Transform sequence of the Machine.

ADVANTAGES OF USING MACHINES IN INVESTIGATIONS

Save Time
Decreasing the need of manual work and giving back precious time for analysis

Lower the Investigation Barrier
Allowing non-technical investigators to run investigations independently

WHAT KIND OF MACHINES ARE AVAILABLE IN MALTEGO?

Pre-Installed Free OSINT Machines

Pre-installed Machines built with Maltego Standard Transforms

Third-Party Machines

Machines included in Hub partner data integrations and other third-party data integrations

Custom Machines

Custom created Machines built by individual users

Start using Maltego Machines to Simplify & Automate Complex Investigation Processes!
